

# Linkages between Financial Services and Economic Activity in Rwanda

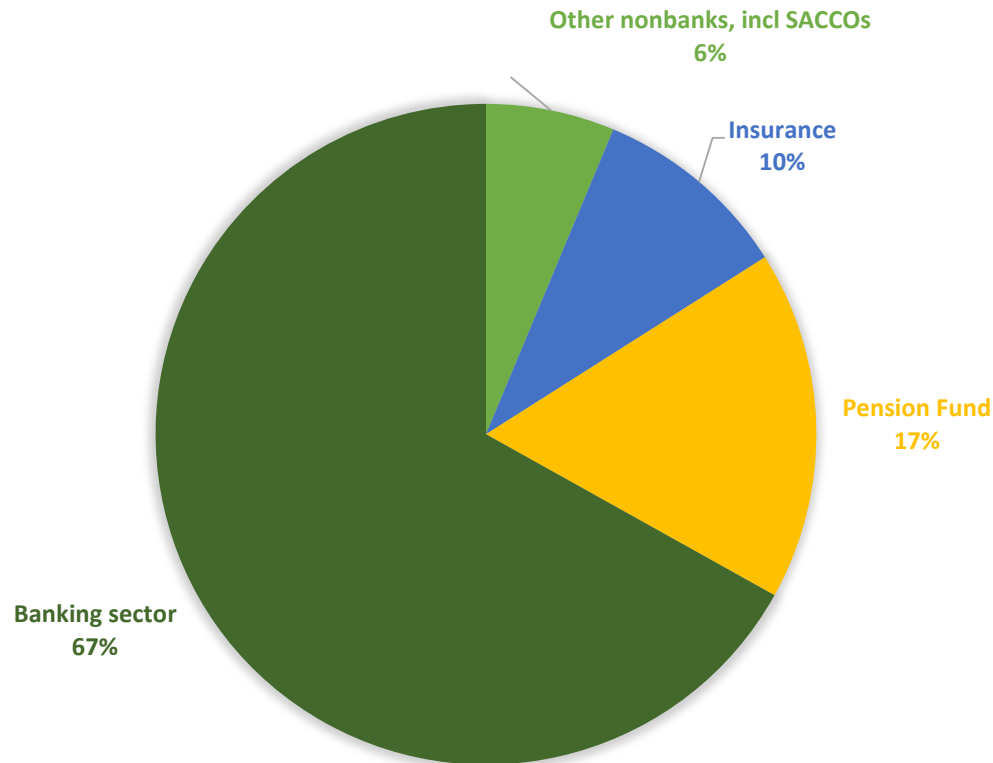

May 2017

---

# (1) The Rwandan Financial System

# Rwanda's financial system is dominated by banks

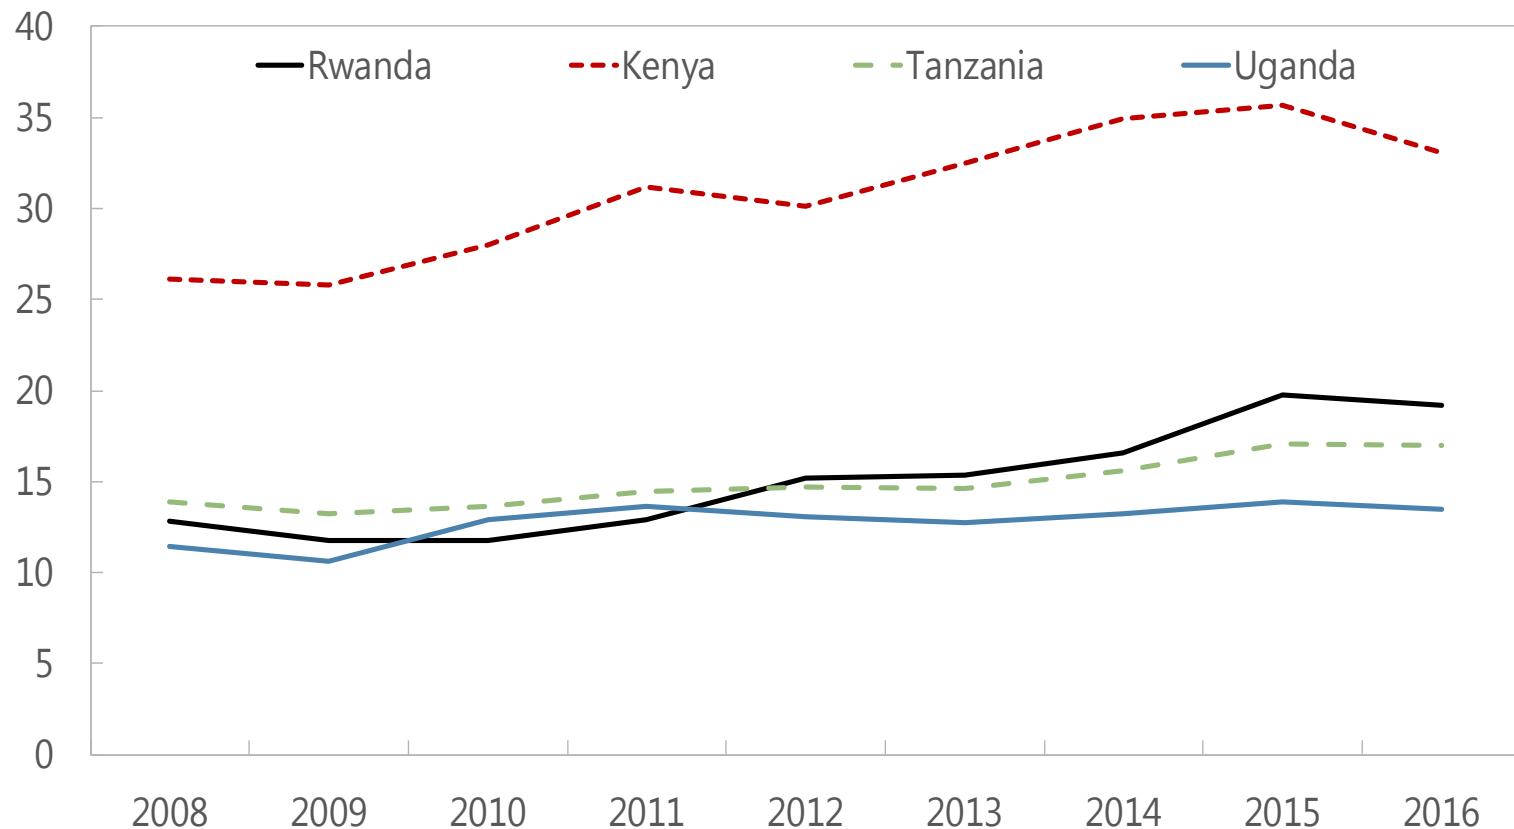

Rwanda: Financial Sector Assets  
=Rwf 3.6 trillion, 54% of GDP

# Rwanda: Private Sector Credit is becoming increasingly important to the economy

## EAC: Evolution of Credit to Private Sector

(Percent of GDP)

## (2) Assessing Financial Sector Stability

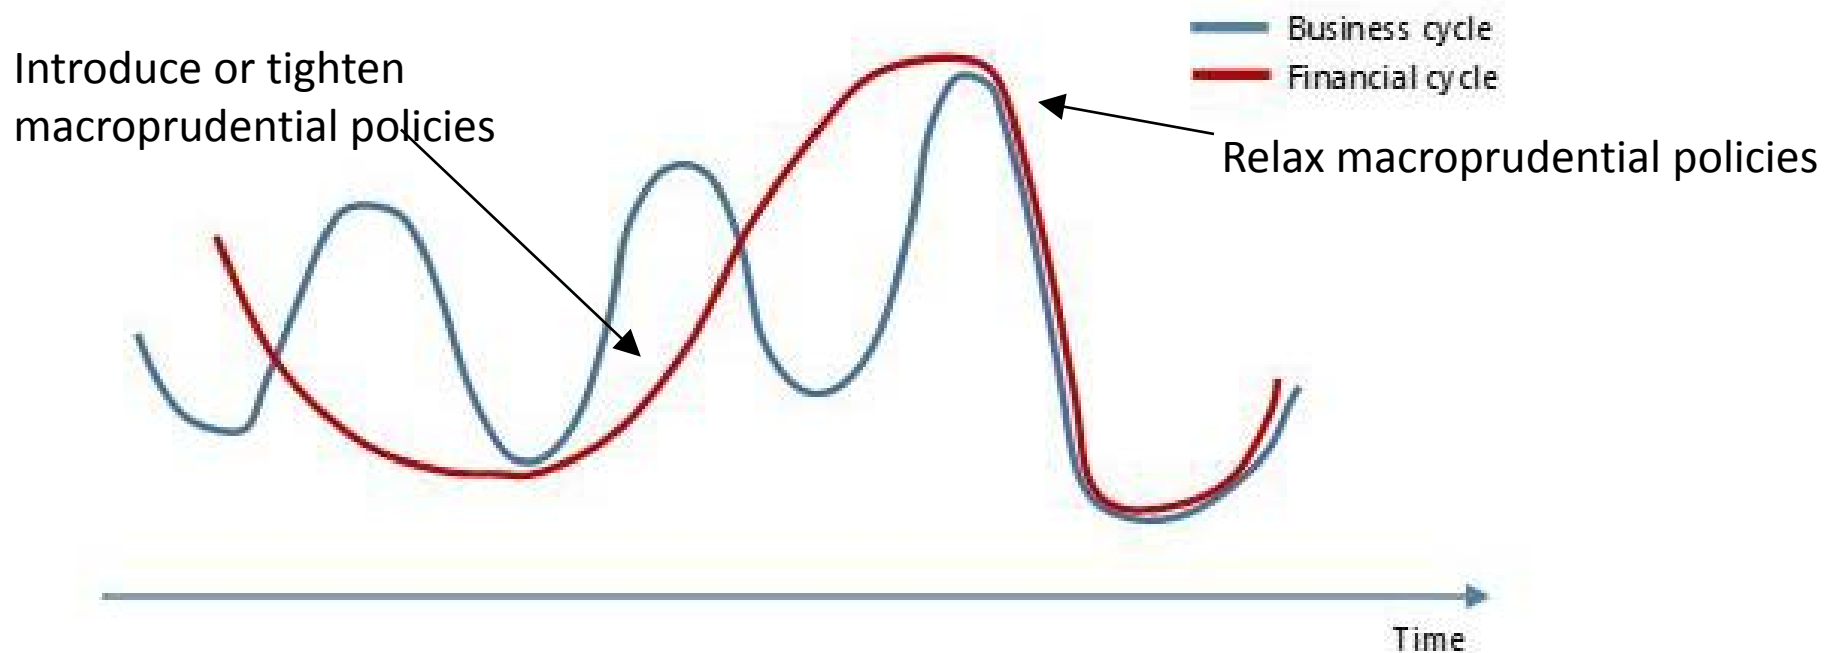

# Financial and Business Cycles

- Financial cycle = Fluctuations of credit and asset prices over time.

# Financial and Business Cycles: Policy implications

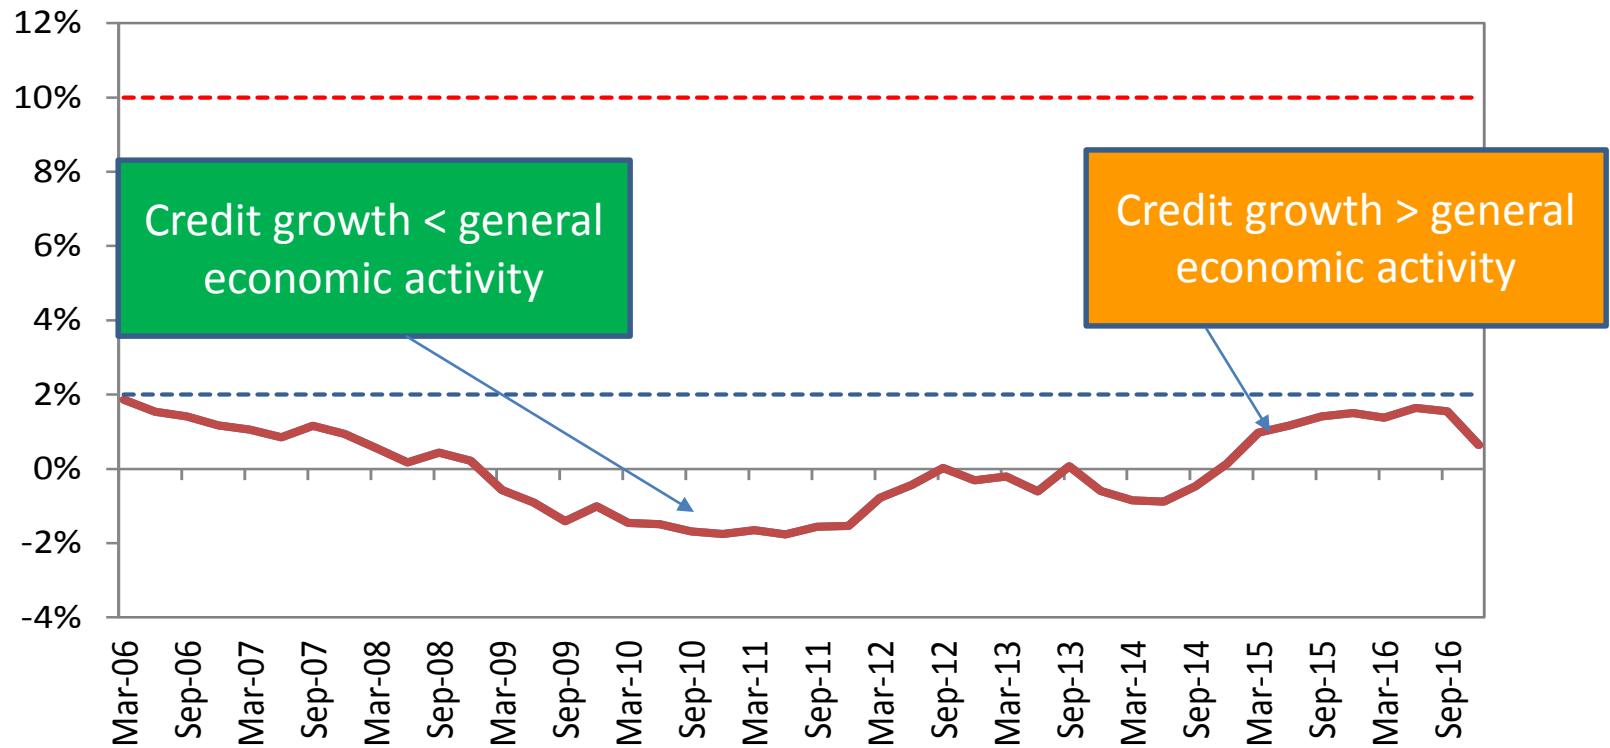

- Use **change money supply conditions** to stabilize the business cycle.
- Use **tools that limit e.g. the procyclicality of credit** to stabilize the financial cycle.

# Analysis of the credit gap in Rwanda

***Credit gap = deviation of actual credit-to-GDP from its long-term trend.***

Rwanda: Credit Gap

# (3) Financial Sector Development

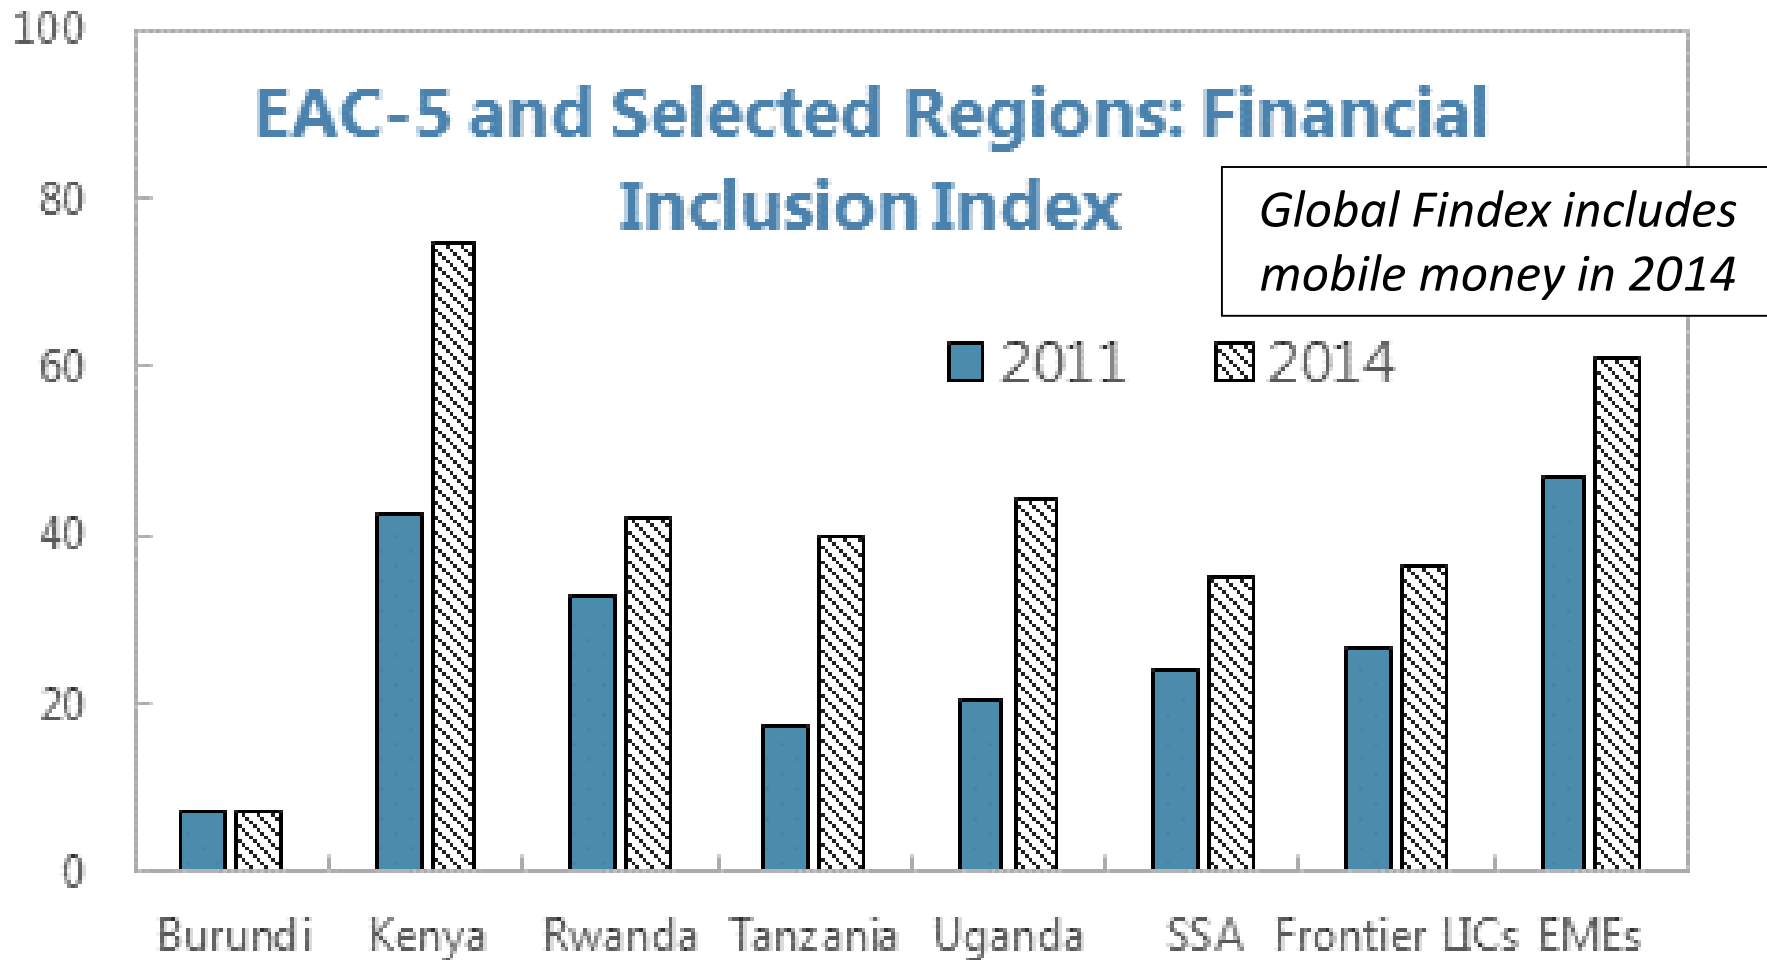

# Measuring financial development: IMF index

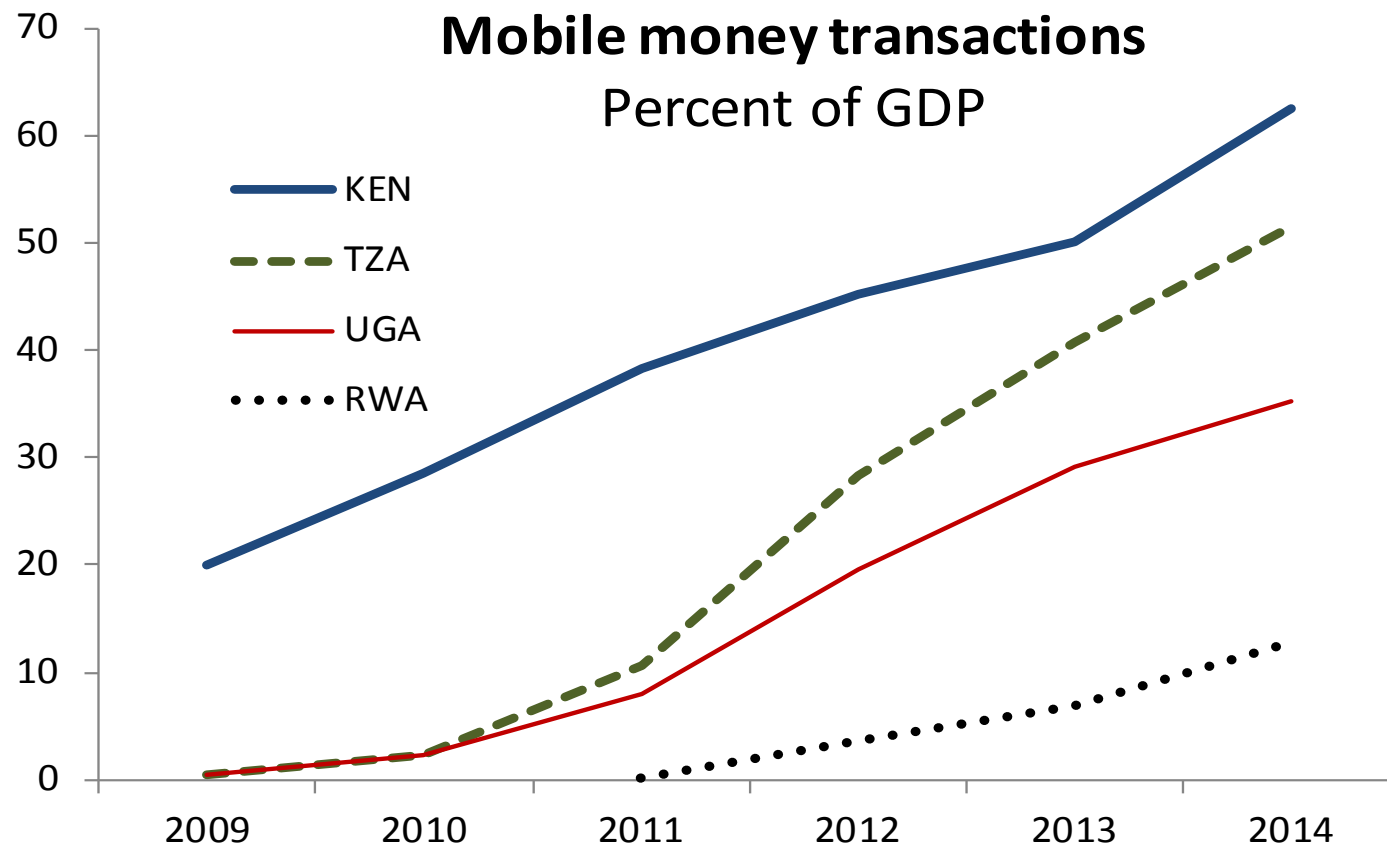

*Developed after financial crisis to explore limits to level and pace of financial development for promoting growth and stability, particularly among EMs.*

- Positive returns to growth and stability at lower income levels, but marginal returns diminish with more financial deepening, with negative returns at some point.
  - Financial “institutions” more important at lower income levels; securities markets more important at higher income levels.
  - Too fast a pace of financial deepening leads to instability.
-

# Financial Institutions – EAC Ahead of the Pack for Access

# EAC Financial Access – a function of innovation

# EAC Financial Access – more innovation

Alternative Financing in Africa

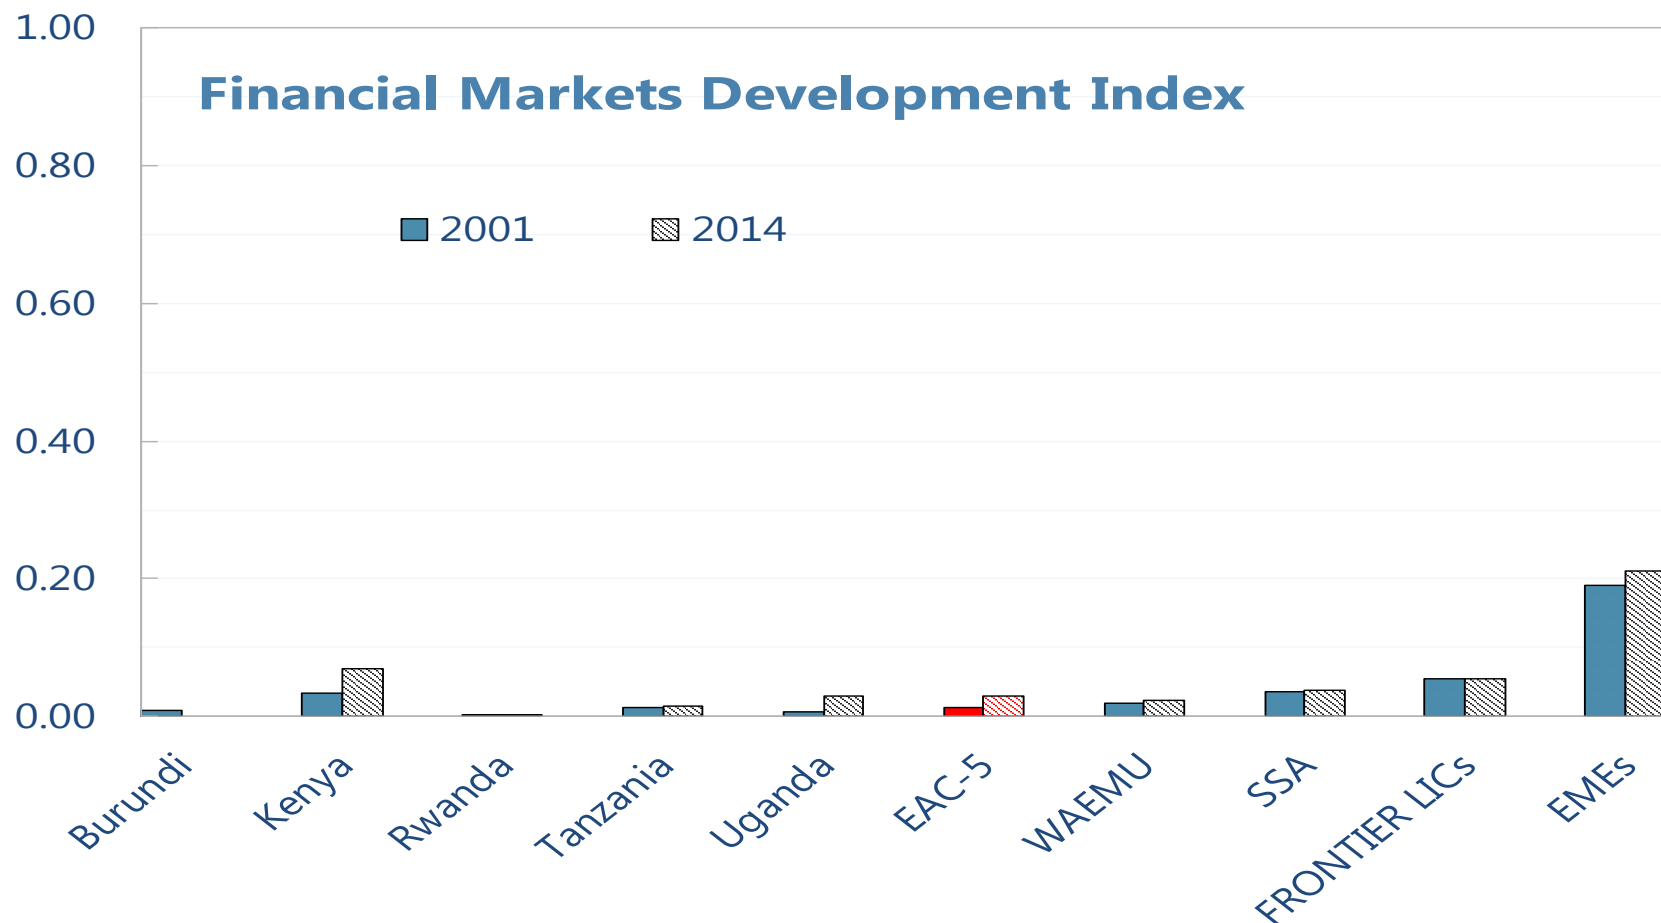

Source: University of Cambridge: Alternative Financing Benchmarking Report, Feb. 2017

# Financial Institutions – efficiency in Rwanda just above sub-Saharan Africa

# IMF index measuring securities markets

## Innovation vs. stability and consumers

- Financial innovation creates synergies for existing institutions and activities and use of big data can help in credit ratings.
- Certain types of financial inclusion indicators, such as credit growing too rapidly, can create greater risks for financial stability and systemic risks. Mobile money and online lending = credit provision.
- Alternative financing creates new concerns about consumer protection.

# Conclusion

- Rwanda's economy has grown fast, and financial deepening has accompanied economic growth.
  - Rwanda's financial system and its supervisory framework is strong and stable. Neither the strong credit growth of the past seven years, nor the recent deceleration of credit growth reveals significant systemic weaknesses or vulnerabilities.
  - However, credit and financial intermediation has become more important for the economy (and will continue to do so).
  - Notable improvements in financial access in Rwanda, but there remains room for improvement in lowering the costs of financial services and creating deeper financial markets.
-

Thank you!
